

AUGMENTED SOFTWARE ENGINEERING

STATE-OF-THE-UNION @ ONEVIEW

11-MAR-2027

ROLAND@TRITSCH.EMAIL

WELCOME/OBJECTIVE

- Skate to where the puck is going to be
- Today, this year and beyond
- The opportunities and the challenges

WHO

**Roland
Tritsch**

Extreme Digital Nomad

Biography

Builder and runner of functional teams and functional systems. Explorer of extreme digital nomading and remote-first cultures.

My name is Roland Tritsch. I am a Software Engineer. I am a Manager. I am a Husband and a Father. I like to make engineers grow and users smile. I like computer science. I believe that computers and software can help to make this planet a better place. When I am not building, running or fixing something (preferably using a functional programming language like Haskell or Scala), I am on a hike (somewhere).

You can find/follow me here.

TODAY

- Multispeed adoption
 - individuals vs. organisations
 - tasks (5x) vs. results/impact (0.5x)
 - by size (small(er) eq. fast(er))
 - by industry (regulated)
 - by lifecycle (prototype vs. maintenance)
- It is easy to feel slow :)

TODAY - CHALLENGES

- Low signal to noise ratio (noise is high(er))
- No established adaptation/maturity frameworks (for organisations)
- Confusing, Frustrating, Intimidating, Threatening, ...

TODAY - OPPORTUNITIES

- Continue to level-up (as individuals)
- Develop your own adoption framework/style (as organisations)
 - Spec-Driven Design vs. Pair-Programming vs. Automation
 - Standardization, Agents, Agents-Automation
- Invest in * - as - Code (to get ready for what comes next)
 - Infrastructure, Architecture, Quality (lint, mutation, ...)

TODAY - (MY) SUGGESTIONS

Invest in your ...

- business-domain know-how
- ability to read/review artifacts (a lot and fast)
- ability to express requirements (what needs to be build)
- ability to express how good/right looks like (definition of done)
- tools and tooling (voice, playwright, mermaid, ...)

THIS YEAR - CHALLENGES

- The new burn-out. Too much ...
 - reading, context-switching, "change"
- Shifting the time/money budget
 - Learning/Tooling/Doing - 10/20/70 - 20/30/50
- Quality/trust erosion (review fatigue, hidden technical debt)
- Hiring signal collapse (the AI-native junior cohort arrives)

THIS YEAR - OPPORTUNITIES

- Address the stress (reviews, ...)
- (Start to) Think different (again) ...
 - Build a system to build systems
 - Flying the plane. Building the plane. (Re)Building the factory
- How to scale horizontally?
 - Single-Engineer/Agent vs. Multi-Engineer/Agent

REVIEW THE REVIEW

Source: <https://www.latent.space/p/reviews-dead>

REVIEW THE REVIEW

Source: <https://www.latent.space/p/reviews-dead>

THIS YEAR - OPPORTUNITIES

- Address the stress (reviews, ...)
- (Start to) Think different (again) ...
 - Build a system to build systems
 - Flying the plane. Building the plane. (Re)Building the factory
- How to scale horizontally?
 - Single-Engineer/Agent vs. Multi-Engineer/Agent

THIS YEAR - AGENT-MANAGEMENT PLATFORMS

- Kubernetes for Agents
- Not working towards up, but towards done (nothing to do)
- Gastown, Agent-Flywheel, CrewAI, ...
- Mixed experience/results (with Gastown)
 - Buggy, patience, cost, ...

Source: Gastown

BEYOND

- Living in a world with no constraints? An abundance of solutions?
 - You do not need to prioritize anymore. Everything can be built!
- The bottleneck is to describe problems that need solving in a way so that they can be solved (e.g. with a measurable definition-of-done)

WRAP-UP/QUESTIONS
